

'aghtfghkofgh' `len('fgh')` == 3

2 times

The diagram illustrates the frequency of a substring within a larger string. The string 'aghtfghkofgh' is shown in dark blue. Two orange brackets are positioned under the 'fgh' substrings at indices 4-6 and 9-11. An orange line connects the midpoint between these two brackets to the text '2 times' below. To the right, the Python code 'len('fgh')' is written in orange, followed by '== 3' in dark blue, indicating the length of the substring 'fgh' is 3 and it appears 2 times.
